Screening task 2 (Drupal 8 custom theme development):

Technical Skills Requireds:

- HTML5/CSS3
- Bootstrap CSS
- Twig Templating system
- Drupal 8 Theming
- GitHub.org account

Tutorials/References:

- https://www.drupal.org/docs/8/theming
- https://twig.symfony.com/

Task details:

Use one of the following Themes and convert it to a Drupal 8 theme for a simple one page site with following specification/functionality

- http://sciencex.wpmanageninja.com/
- https://theme-gavias.com/wp/edubiz/

1. The theme must be responsive to all devices. (use can bootstrap framework)
2. Basic regions (layout) should be properly defined and put in the template
3. Design template for at least "basic page" content type.

Submission guidelines:

- Create a repository with the same name as your custom theme on https://github.com/
- Regularly commit and push the code on the repository after development.
- When you are finished development, push the entire code on the GitHub repository link and submit your valid repository url (for eg. https://github.com/user/custom_theme.git) in the submission box below

Note: If you are new to git, please refer to the **tutorial l**ink given below: (**https://spoken-tutorial.org/tutorial-search/?search_foss=Git&search_language=English**)

Evaluation Criteria:

The completed tasks will be evaluated on

- Proper region definition and placement of regions in twig
- Coding standard as per https://www.drupal.org/docs/8/theming
- Design and functionality of theme
