

# Osdag

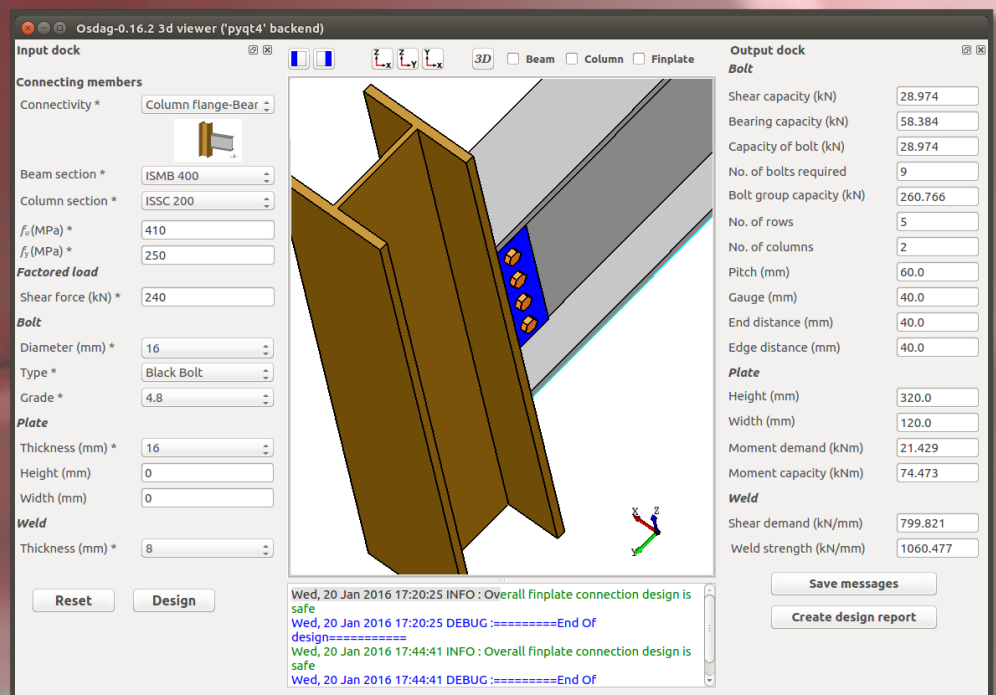

Open steel design and graphics

## Introduction

Osdag is a cross-platform, free and open-source software (FOSS) for the design of steel structures, following the Indian Standard IS 800 : 2007. It allows the user to design steel structures (connections, members and systems) using a graphical user interface.

The GUI provides a 3D visualisation of the designed component and creates images for construction/fabrication drawings. The design is typically optimised following industry best practices.
