2020-12-18 00:31:20 - Osdag - INFO - The minimum factored bending moment should be at least 0.5 times the plastic moment capacity of the beam to qualify the connection as rigid connection (Annex. F-4.3.1, IS 800:2007)

2020-12-18 00:31:20 - Osdag - INFO - The value of load(s) is/are set at minimum recommended value as per Cl.10.7 and Annex. F, IS 800:2007

2020-12-18 00:31:20 - Osdag - INFO - Designing the connection for a factored moment of 83.07 kNm

2020-12-18 00:31:20 - Osdag - WARNING - [Beam-Column Compatibility] The design factored bending moment (83.07 kNm) being transferred from the beam to the column exceeds the maximum capacity of the column section (54.09 kNm) (acting along the minor (y-y) axis)

2020-12-18 00:31:20 - Osdag - INFO - Note: The maximum moment check is based on full capacity of the column section classified as Semi-compact, as per Table 2 of IS 800:2007

2020-12-18 00:31:20 - Osdag - INFO - The value of design bending moment is set to be equal to the maximum capacity of the column,
