

CHANGE DETECTION USING NDVI

MAP DESCRIPTION

Note: After the evaluation of the NDVI 2011 AND NDVI 2017 Raster layer and carry out raster calculation over it we obtain this change detection layer and can analyze about the variation in the vegetation of the Nainital District . We can see from the layer that there is only the small area in the map where the value of change is very less. But in the most of the rest places we find out that there is a major change in the vegetation pattern for the place.
