

HOSPITALS SCARCITY AREAS IN BIHAR

LEGENDS

- Hospitals in Bihar
- bihar_mctowns
- areas with no access to hospitals

hospital index

- 56266 - 167578
- 167578 - 250208
- 250208 - 301088
- 301088 - 393692
- 393692 - 583847

Introduction:

Bihar the state of eastern India converges of more than one cultural region and also known as the worlds third most populus subnational entity We here tried to focus on district wise paucity of hospitals in Bihar by studying total 38 districts in Bihar

Healthcare and facilities:

Healthcare is most important aspect of society but current state of affairs in Bihar can be seen as Acute manifestation of perennial weakness in its healthcare system

Current Posture :

- Population density of 1160 person per sq.m
- overall system never develop enough to meet the needs of growing population
- National Rural Health mission (NRHM) 2005 infused resources into the system but did not make significant changes in the system
- At district level care facilities cater about to 3 million people each giving rise to more challenges
- the major health care demographic indicator of state infant mortality rate 42% and maternal mortality rate up to 16%

Inference:

- lack of primary health care centers and hospitals leads to the problems in the system
- there should be sufficient hospital facilities according to the population of the region
- Here in this mapping we tried to find the areas with no nearby access to the hospitals
- with which it is easy to build network of health facilities in required area
