

Title: Mapping of natural resources / man-made features in the state of Jharkhand

Map description and analysis

Introduction:

The Indian state of Jharkhand provides shelter to one of the major forests in the world i.e., the Saranda- Sal Forest. The map provides an outline to resources (both natural and man-made) exhibiting in the state.

Forest Divisions:

- Densest forest in the state is found in the western side engulfed in the region of Lohardaga and Koderma
- Moderate to open forests are found in regions of West Singhbhum
- Regions comprising of places titled Deoghar, Danka, Dhanbad have zero forest density

Wildlife and Bird Sanctuaries:

- The state has one Bird Sanctuary located in its upper-east Sahibganj region
- Other sanctuaries includes the ones located in Koderma, Dalma and Hazaribagh expanses

Minerals and Mines:

- The major mineral encircling the state are lead, mica and graphite
- The maximum mineral found in the state is alumium and copper together

Dams:

- The state holds in capacity to install dams on multiple grounds
- Tilaiya, Khandoli are few popular dams that also deliver as a site for tourist attraction

Potential Application:

- The map will provide with information on the mines and minerals which can be used by the specialists for minerals extraction
- Also, dams can be keyed for redistributing divisions if water scarcity occurs in any region
